Definition of Science Fiction

Science fiction is a genre of fiction in which the stories often tell about science and technology of the future. It is important to note that science fiction has a relationship with the principles of science—these stories involve partially-true partially-fictitious laws or theories of science. It should not be completely unbelievable.

Science fiction texts are also interesting because they include human elements, explaining what effect new discoveries, happenings and scientific developments will have on us in the future.

Science fiction texts are often set in the future, in space, on a different world, or in a different universe or dimension. Early pioneers of the genre of science fiction are H. G. Wells (*The War of the Worlds*) and Jules Verne (*20,000 Leagues Under The Sea*).
